

General Background

In new and unfamiliar places, many of us experience a sense of insecurity, especially when we need to move from one location to another. These feelings can stem from concerns for our personal safety, lack of knowledge about the area, or insufficient up-to-date information about the surroundings. For example, there may be dark or deserted streets, a lack of open businesses nearby, or areas with high crime rates.

The app is designed to address this need and enable users to find a safe, data-driven route, helping them feel safer and more comfortable as they move around in unfamiliar areas.

Product Specification

App Goals:

1. To provide users with point-to-point routes with a focus on personal safety elements.
2. To encourage a sense of security among users in a wide range of scenarios, such as visiting a new city (even abroad), returning home at night, or finding alternative routes in emergencies.
3. A simple, intuitive, and fast user experience.

Product Requirements:

1. The app is intended for smartphones and tablets:
 - 1.1 The app will run on most existing smartphones worldwide.
 - 1.2 The app will support devices with Android OS (at least two major versions back from the latest).
 - 1.3 The app will support devices with iOS (at least two major versions back from the latest).
2. The app will be available for free download on Google Play and the App Store.
3. Upon downloading the app, user identification will be performed by manually entering a phone number or email and sending a random 5-digit code for verification and approval.
4. The app will manage a database containing:
 - 4.1 Official crime data from reliable sources.
 - 4.2 Lighting data.
 - 4.3 Business density data.

4.4 User reports.

4.5 User list – for each user, the system will store:

4.5.1 Phone number

4.5.2 Preferences list

4.5.3 Previous reports and ratings for reports

4.5.4 Ratings for completed routes

5. Safe routes: The app will calculate a safe route using a routing engine.

5.1 Route calculation:

- Setting origin and destination points
- Option to select intermediate waypoints
- Offering at least two alternative routes
- Calculating estimated time of arrival (ETA)
The safest route will be based on criteria such as:
 - Streets with adequate lighting
 - Presence of open businesses (shops, restaurants, cafes, etc.) along the route
 - Areas rated as safe according to crime data
 - User reports

5.2 Route scoring system:

- Street lighting (30% of the total score)
- Density of open businesses (25%)
- User ratings (20%)
- Police crime data (15%)
- Real-time user reports (10%)

6. Real-time information:

- Display of open businesses along the route based on location and opening hours
- Real-time updates about changes in lighting or events that may affect safety

6.1 Route tracking:

- Current location on the map
- Progress along the route
- Updated estimated time of arrival
- Distance to destination

6.2 Smart alerts:

- Deviation from the planned route
- Changes in route conditions
- Businesses closing during the route
- New safety reports in the area

7. Personalization:

Users can define preferred route criteria, such as avoiding certain areas or choosing routes with maximum active businesses.

Marking features that cause a lack of security in personal preferences.

7.1 Filtering and personalization:

- Preference for main/illuminated streets
- Avoiding specific areas
- Defining preferred hours
- Choosing a minimum safety level

7.2 Saving routes:

- Favorite routes
- Route history
- Scheduling routes in advance
- Sharing routes with other users

8. Community sharing:

Users can rate routes and provide feedback about their sense of safety.

User reports about features that cause insecurity or discomfort, such as poor lighting, drug users, homeless individuals, intoxicated persons, violence, etc.

8.1 Report categories:

- Faulty lighting

- Suspicious gatherings
- Road hazards
- Violence incidents
- Harassment
- Presence of police/security personnel

8.2 Reporting mechanism:

- Adding a photo (optional)
- Urgency rating
- Verbal description
- Automatic tagging of location and time

Validation and verification:

- Approval of reports by additional users
- Scoring system for reporter reliability
- Spam report filtering
- Automatic expiration of old reports

9. Location sharing

9.1 Sharing location with contacts:

- Selecting favorite contacts
- Setting the duration of sharing
- Controlling the level of detail in shared information
- Automatic notifications upon arrival at the destination

9.2 Emergency mode:

- Panic button
- Immediate location sharing with contacts
- Quick call to emergency services

10. User profile

10.1 Basic information:

- Name and photo
- Verified phone number
- Favorite addresses (home, work)
- Preferred language

10.2 Security preferences:

- Privacy settings
- Managing emergency contacts
- Notification settings
- Location sharing policy

10.3 Personal adjustments:

10.3.1 Navigation preferences:

- Preferred route type
- Preferred/avoided areas
- Usual active hours

10.3.2 Customized notifications:

- Types of alerts
- Alert frequency
- Notification channels

Screens

מסך רישום

The registration screen features a light orange background with a subtle gradient. At the top, the title "מסך רישום" is centered. Below it, there are four white input fields with blue borders, each containing a placeholder text: "Email or Phone Number", "Full name", "Password", and "Choose your preferences". At the bottom, there is an orange "Sign Up" button. Below the button, the text "Have an account? [Log In](#)" is displayed, followed by a smaller line of text: "We need permission for the service you use" and a "Learn More" link.
